**I chose to vaccinate!**  
Because it's the responsible  
thing to do!

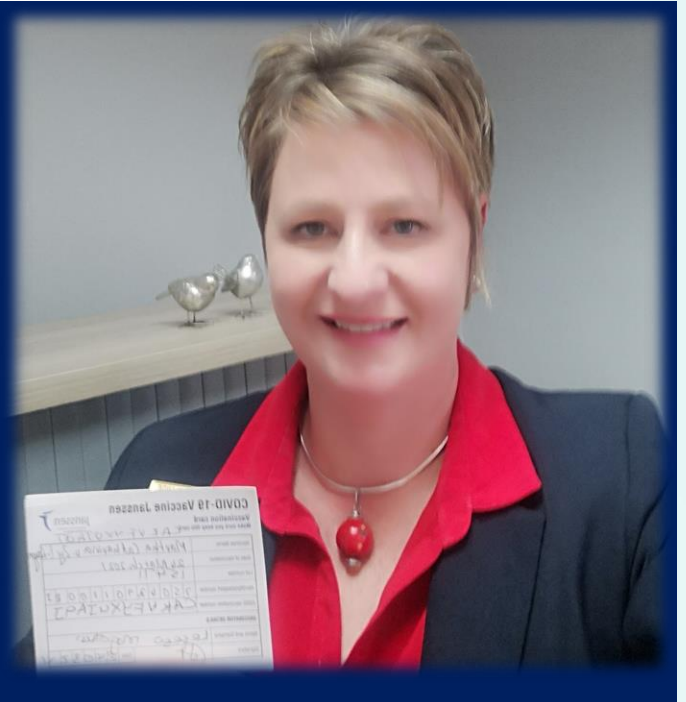

PLATINUM  
HEALTH

I care about myself, my colleagues, neighbours and my loved ones. Many people suffered severely during the pandemic, lost livelihoods, loved ones, even hope ... By vaccinating I could play my part in achieving herd immunity.

Evidence exist that the risk of transmitting the disease is higher in unvaccinated people than those who are vaccinated - I do not want to cause harm to others by transmitting the virus.

The risk of becoming critically ill or dying from COVID-19 is significantly higher in unvaccinated people. I want to be there for my family, colleagues and loved ones to support them through thick and thin.

Vaccination is the only chance we have to return to the life we knew before COVID-19.

- To sit in a restaurant without wondering if I would contract COVID-19.
- Visit loved ones and friends without having to worry about the curfew, social distancing and contracting or transmitting the virus.
- Go to large gatherings like church, rugby or soccer games and festivals.
- Have a Festive Season at the end of the year and spend time with loved ones without any worries.
- To be able to stop wearing masks .
