

COVID-19 can affect people OF ANY AGE

PLATINUM
HEALTH

A lot of misinformation about the COVID-19 vaccine has been doing the rounds. The fact of the matter is, the COVID-19 vaccine saves lives. Empower yourself by knowing the facts.

MYTH:

I'm young and low risk so the COVID-19 vaccine isn't for me.

FACT:

Although the risk is higher with age and comorbidities, ***COVID can affect people of any age.***

COVID-19 can cause long term complications and death at all ages. The vaccine is designed to reduce the risk of these disastrous consequences and protect both the individual vaccinated and the community in which they live.

The more people vaccinated, the quicker we can achieve population (or herd) immunity and protect those most vulnerable amongst us who are at risk of complications from COVID-19.
