

COVID-19 VACCINE

You need to vaccinate
even if you had
COVID

PLATINUM
HEALTH

A lot of misinformation about the COVID-19 vaccine has been doing the rounds. The fact of the matter is, the COVID-19 vaccine saves lives. Empower yourself by knowing the facts.

MYTH:

You don't need vaccination if you already had COVID-19.

FACT:

Even if you have already had COVID-19, the World Health Organisation (WHO) recommends that you be vaccinated.

The protection that someone gains from having COVID-19 will vary from person to person, and it is also not known how long natural immunity might last.

Vaccination do not guarantee that we will not contract the disease - vaccines are designed to reduce our risk of severe disease if we contract COVID-19 after being vaccinated.

- You need to wait a minimum of 30 days after contracting COVID-19 before being vaccinated.*
- People who have been admitted to hospital for severe or critical COVID-19 illness and have received monoclonal antibodies or convalescent plasma, are advised to delay vaccination for 90 days.*

**Make the right choice -
GET VACCINATED!**
