

Covid-19 cases on the rise

Please remain vigilant!

PLATINUM
HEALTH

Over the past week, South Africa has seen sharp increases in Covid-19 cases. On 15 April 2022, **1 846** new cases were recorded (positivity rate 8.4%) and on 22 April 2022, **4 631** new cases were recorded (positivity rate 17.8%).

Early indications show that we're entering a possible fifth Covid-19 wave, and therefore it is imperative for all Platinum Health (PH) members to remain vigilant and protect themselves. People are also more susceptible to pneumonia during winter months, and should they get infected with Covid-19, they are at an even greater risk.

Science has proven that our best defense against Covid-19 is to get vaccinated.

PH therefore urges members to get vaccinated if they have not already done so. Members who qualify, should get the booster shot too, as it will provide them with maximum protection.

Platinum Health members can visit any Covid-19 vaccination site and PH will cover the costs.
