

Take your PFIZER BOOSTER TODAY!

WHAT YOU NEED TO KNOW

Covid-19 vaccine boosters can further **enhance or restore protection** that might have wained over time after your primary series vaccination.

People are protected best from severe Covid-19 illness when they **stay up to date with their Covid-19 vaccines**, which includes a booster for many people.

Patients with **comorbidities like Hypertension, Diabetes, HIV, COPD and other immunosuppressive conditions** are encouraged to take the Pfizer booster as soon as they qualify.

In an article published on 22 April 2022 (Nature); it was established that people that had received a **third dose of mRNA (Pfizer) vaccine**, had vastly superior B cell protection against Covid-19 disease.

Everybody should consider receiving the booster. As immunity waines, the booster restimulates the immune system, hence optimising your protection against severe disease or hospitalisation.

Drive your Life!
**Boost with a
Pfizer jab!**

Booster Vaccine Guideline

- Members over 18 who received one dose of the Johnson & Johnson (J&J) Covid-19 vaccine are eligible to receive a booster dose of the Pfizer jab after **60** days.
- Members over 18 who received two doses of the Pfizer vaccine will be eligible to receive a booster dose of the Pfizer jab after **90** days.
